

NC State Retiree Open Enrollment: 2025 -> 2026 Plan Changes

Cross-reference of the 2025 and 2026 patient-search and prescription-search Excel exports. The report identifies patients with evidence of a 2025 NC State plan / NC State Retiree Humana plan and evidence of Humana (335) HMO or Devoted coverage in 2026.

Patients identified	Humana 335	Devoted	Old + new plan seen in 2026
54	49	5	41

How to read this report. A patient is included when the 2025 data shows NC State Health Plan / NC State Retiree Humana (including NCTD/APM wording where present) and the 2026 data shows Humana (335) HMO or a Devoted plan. A 2026 "old plan also seen" flag is retained because some patients legitimately used both plans during the year. Rx counts are evidence counts, not unique prescriptions across all possible reversals/transactions.

Matching note: Names were normalized for capitalization, punctuation, and common middle-initial differences. One ambiguous same-first/last-name collision (David Cline with different middle initials) was excluded rather than risk a false match.

Important Interpretation Notes

- 1. This is a change-identification report, not a termination report. If the old State plan appears in 2026, that does not negate the change; it may reflect early-year fills, coordination, transition claims, or use of both coverages.
- 2. The strongest evidence is when both the patient-search file and Rx-search file support the transition. Patients found through Rx history alone are still included because your workflow intentionally uses both methods.
- 3. The counts beside plans represent the number of matching rows/transactions in the supplied exports. They are included to show strength and frequency of evidence, not to calculate enrollment totals.
- 4. This report is based only on the four supplied Excel files and should be used as an operational review list. Any patient whose identity is uncertain should be confirmed in the pharmacy system before outreach or plan-related action.
